

## SELECT CUT SYSTEM™ - DECK STORY

With all of its innovative features, the Select Cut System™ is the most advanced design available. Adjustability to match mowing requirements means satisfied customers, and its efficiency contributes to the bottom line.

### FEATURES

- Offset deck for efficient cutting and reduced trimming
- Sloped-nose design with a ¼"-thick adjustable leading edge
- Deck is pulled over terrain by heavy-duty cast-iron front deck trail links for a clean cut with no scalping
- Four strategically located ball wheels to eliminate scalping
- Patented SmartJet™ deck wash system
- Greasable cast-aluminum spindles with precision tapered roller bearings for longevity and serviceability
- Standard adjustable striping rollers
- Vented cast-iron pulleys for longer belt life

## CONFIGURABLE INNER BAFFLE

### **BAFFLE OUT**

This configuration allows for maximum airflow and discharge. Ideal for dry or thick growth, especially southern grasses like bahia.

### **BAFFLE IN**

Airflow channels clippings into the extended cutting edge of the blades for a finer, cleaner cut. Ideal for most turf types, especially northern grasses such as fescue, rye and bluegrass.

## SLOPED NOSE FRONT SKIRT WITH AN ADJUSTABLE LEADING EDGE

### **NORTHERN GRASSES SUCH AS FESCUE, BLUEGRASS AND MOST TURF GRASSES**

Maximum vacuum is created so that grass blades are lifted into the cutting edge for an even cut.

### **SEED STEMS SUCH AS BAHIA AND DANDELIONS**

The front edge is up so that seed stems and grass blades rebound into the cutting edge for a cleaner, even cut.
