

SPREADER EXCLUSIVE FEATURES

Calibration

Easy-to-use calibration gauges are included with all spreaders and help calibrate the different rates of materials from any of the fertilizer manufacturers

Application Control Settings

Speed-control lockouts make the application to speed rates easy for the operator to maintain

Hopper Covers

We offer an optional cover that will protect the material from becoming contaminated and also add protection from the weather

Premium Kawasaki® Engines

For longer life and performance needed for any type of job

Hopper Construction

80- and 125-lb capable hoppers made from injection-molded polyethylene for extended life and ruggedness that the professional landscaper requires

Gearbox

(XP) Our sealed gearbox protects gears from dust, moisture, debris, and adds to the quality Cub Cadet Commercial puts into the BEST spreader in the commercial marketplace

Screen and Agitation Methods

Cam-operated oscillating agitator helps control clumping of material, and a mesh screen helps break up any clumps that may form in some materials

Drive System

Hydro-Gear™ hydrostatic drive (XP) gives a smooth and easily controlled speed that will help apply an even flow of material in all terrain

Deflector Chutes

Allows control of the spread pattern and also helps when edging a property

Tires

Oversized (and XO with foam-filled front) tires increase stability and provide a smoother and easier application when spreading material over thicker, taller grasses

Stainless Steel Construction

Frame (XP), axle (XP), impeller shaft and on/off assemblies add durability and extend the life of this commercial-grade line-up
