

THE REVOLUTIONARY TANK™ S

PRECISION CONTROL

Whether cutting grass on steep hills or around manicured landscapes, the TANK S with its Synchro Steer™ technology, allows the operator to traverse challenging terrain with minimal effort and without turfing.

The patented technology enables full directional control of the front wheels with coordinated individual rear wheel speed control to provide the operator with unmatched maneuverability and traction on any terrain.

This gives the TANK S precision control, even on steep hillsides that previously required a walk-behind. The Synchro Steer™ technology also allows the TANK S to make true zero-turns and tight maneuvers around any obstacle, while virtually eliminating turf damage.

The magic of the system is variable ratio steering gears, which turn the left and right front angles much further than conventional steering systems, all while the operator is effortlessly rotating the steering wheel. A separate traction drive system synchronizes the steering angle of the front tires with the speed and direction of the rear pump and wheel motors. True zero-turn is achieved when the operator turns the steering wheel far enough that the inside rear wheel spins in reverse just like a traditional zero-turn mower controlled by lap bars. No additional training is required because the unit's intuitive controls eliminate any surprises that may reduce the operator's efficiency, especially on difficult terrain.

SIMPLE TO OPERATE

The operator simply adjusts the seat and cut height, starts the engine, releases the parking brake and depresses the speed control pedal, then steers where he/she wants to mow.

The Select Cut System™ with its configurable deck provides a superior quality of cut in all types of grasses.

Deck height adjustment is effortless with the hydraulically powered single lever deck lift.

Enhanced operator comfort for maximum productivity:

- Premium seat adjustments, including arm rests, lumbar support and suspension stiffness
- 3-way adjustable steering column (fits the comfort level required by any operator)

Maximum performance and durability with:

- Proven TANK platform with revolutionary Synchro Steer™ technology
- Remote hydraulic fluid cooling system
- Premium 31 and 37 HP* engine options to match power to any mowing requirements
- 60" and 72" Select Cut System™ deck options to minimize cut time with premium cut quality
