COMPACT TRACTOR LINE-UP

WHAT COMPACT TRACTOR IS RIGHT FOR YOU?

Sc2400

Ex2900/Ex3200

Ex450

POSITIONING

The Sc2400 was designed as the transitional tractor, taking customers from lawn and garden tractors into the sub-compact tractor. Operation is easy and safe, with a lower cost of ownership. It has big tractor features in a small tractor; the novice operator becomes experienced and is ready to step up for future tractor purchases.

The medium chassis Ex Series tractors are for the price-conscious customer looking for a rugged and reliable tractor at an affordable price. These tractors are great for large property owners looking to clean up and maintain their property, or farmers looking for an affordable workhorse on their farm, or start-up landscapers needing a rugged and reliable tractor.

The large chassis Ex450 tractor is also for the price-conscious customer, except this customer is looking for the same rugged design with more power and greater versatility on attachments; for larger property owners, farmers, landscapers and commercial customers.

TARGETED APPLICATIONS

Mowing grass and collecting; loader work; snow blowing w/optional cab and hydraulic rotation kit; tilling; dozerblade and 3-point grading work.

Loader work; backhoe; mid and rear mowing including rear rotary cutter; tilling; dozerblade w/optional cab for grading and snow removal, and standard Category 1, 3-point hitch for grading attachments or post hole digging; optional hydraulic remote to power cylinders on optional attachments, and optional Power Beyond Kit to power remote valves on attachments.

Loader work; backhoe; rear mowing including rotary cutting; tilling; rear blade for grading and snow removal, and standard Category 1, 3-point hitch for grading attachments or post hole digging, optional hydraulic remote to power cylinders on optional attachments, and optional Power Beyond Kit to power remote valves on attachments. The CL400 loader for the Ex450 also comes with a full array of attachments; pallet forks, bale spear and high-volume bucket to fit the universal quick attach bucket.

YANMAR DIESEL ENGINE

Powered by a 3-cylinder liquid-cooled, indirect-injection diesel. Producing 24 gross HP* @ 3,300 RPM and a net HP* @ the PTO of 16.5 HP*, this engine is 1,150 @ low RPM and 3,470 @ high RPM. This indirect diesel engine has an advanced combustion chamber; the air charge enters the chamber at a higher volume and greater pressure, creating a better fuel mixture. The mouth of the swirl chamber is specially designed to begin the swirl process before the mixture enters the combustion chamber. This combination creates a powerful combustion, resulting in a cleaner, more efficient engine.

28.7 and 32 HP*, 3-cylinder, direct injection diesel engines with a large bore and stroke provide for excellent torque reserve. Engines meet EPA emission standards. Auto-bleed fuel system will automatically self-prime the injection pump, lines and injectors for fast fuel recovery and easy starting if the tractor is run out of fuel.

45 HP*, 4-cylinder, direct injection diesel engine with a large bore and stroke provides for excellent torque reserve. Engine meets EPA emission standards. Auto-bleed fuel system will automatically self-prime the injection pump, lines and injectors for fast fuel recovery and easy starting if the tractor is run out of fuel.

* as rated by engine manufacturer

TRANSMISSION

Engineered for a smoother, quieter and more consistent horsepower transfer to the wheels. This hydrostatic transmission also allows the operator to change ranges on the fly, making better use of the horsepower. Power into a pile of material, shift into low, and you can feel the power transfer to the wheels.

The hydrostatic transmission provides infinite ground speed with no clutching or shifting required for direction change.

Gear-driven transmission with synchronized shuttle transmission and 3 ground speeds with 3 working ranges give more horsepower transfer with faster cycle times; 9 forward and 9 reverse speeds give greater direction change over standard collar-shift transmissions.

<u>ROCKER PEDAL FOOT CONTROL / DUAL PEDAL FOOT CONTROL</u>		
Rocker pedal foot control on the Sc2400 sub-compact tractor allows for easy forward and reverse direction change, comes standard with cruise control.	Dual foot pedal control HST allows for easy forward and reverse direction change, comes complete with standard cruise control.	A 3-speed shift lever located at the right side of the steering wheel makes for faster shifts and a more open operator station; the shuttle lever located at the left side of the steering wheel allows for easy and fast direction changes.
<u>SELECTABLE 4-WHEEL DRIVE</u>		
When traction is needed, the operator can stop and engage the 4WD lever. If additional traction is needed, the operator can stop and apply pressure to the differential pedal, which slowly applies transmission power until the differential engages. This locks both rear tires for maximum pulling power.	Same as Sc2400	Same as Sc2400
<u>WET DISC BRAKES</u>		
Wet disc brakes are designed to be submersed in oil, which keeps them consistently cooled. Wet disc brakes have longer life and perform better than dry brakes.	Same as Sc2400	Same as Sc2400
<u>FULLY HYDRAULIC POWER STEERING</u>		
This assembly has no steering shaft, universal joints or gearbox. This makes for a stronger, smoother and more reliable steering system.	Same as Sc2400	Same as Sc2400

Sc2400	Ex2900/Ex3200	Ex450
<u>OPEN OPERATOR STATION</u>		
Semi-flat, walk-through operator station with controls in close proximity to the operator; uncomplicated and easy to use. This wide open platform allows the operator to sit comfortably but still feel part of the machine. The operator station is ISO-mounted, which reduces vibration and lowers operator fatigue.	Ergonomically designed operator station provides comfortable feel with all controls in close proximity to the operator.	Ergonomically designed operator station provides comfortable feel with all controls in close proximity to the operator.
<u>INTEGRATED LOADER JOYSTICK FOR SCV</u>		
The SCV is integrated into the fender next to the operator's seat and also includes a lockout feature. Having the control lever close to the operator reduces fatigue in the neck, shoulders, elbows and wrists. The float feature allows the operator to evenly float out materials such as top soil. The lockout feature prevents the operator from accidentally engaging the attachment during operation.	Same as Sc2400	Same as Sc2400
<u>CONTOURED HIGH BACK SEAT</u>		
Comfortable, high-back seat with a retractable seatbelt is easy to use and has a 5-position seat adjuster.	Same as Sc2400	Same as Sc2400
<u>ROLL OVER PROTECTION</u>		
Rigid ASAE-, SAE- and OSHA-certified ROPS and seatbelt ensure operator safety.	Same as Sc2400	Same as Sc2400

BEYOND THE EXPECTED.™

COMPACT TRACTOR LINE-UP

Sc2400	Ex2900/Ex3200	Ex450
<u>PTO OPERATION</u>		
Operation of both rear- and mid-PTO are totally independent of the tractor transmission, allowing the PTO to be engaged or disengaged on the go. Using electric over hydraulic for engagement, pull the switch and the solenoid opens for smooth power delivery on engagement.	Live, continuous PTO mechanical engagement; depressing the clutch ½ down will stop travel, fully depressed will stop travel and PTO. Due to the HST drive system, you can operate ground rate changes independent of the PTO.	Live, continuous PTO mechanical engagement; depressing the clutch ½ down will stop travel, fully depressed will stop travel and PTO.
<u>540 REAR PTO; 2000 MID-PTO STANDARD EQUIPMENT</u>		
Mid/both/rear selector allows for rear and mid-PTO to be operated simultaneously or independent of each other.	Standard 540 rear PTO; optional mid-PTO; two-stage clutch operated.	Standard 540 rear PTO only; two-stage clutch operated.
<u>IMPLEMENT ATTACHABILITY AND COMPATIBILITY</u>		
All implements attach and detach quickly and easily; mower-loader compatibility; modular design of 3-bag system allows for easy and fast attachment/detachment.	All implements attach and detach quickly and easily; mower-loader compatibility.	All implements attach and detach quickly and easily; mower-loader compatibility.
