

QUALITY OF CUT

Cub Cadet's innovative cutting system leaves no grass uncut. Tall grass, thick grass, wet grass – it doesn't matter. Each component from deck to blades, from dome design to discharge chute work together to ensure an unsurpassed quality of cut. Added strength and rigidity keep the high-lift blades from deflecting and flexing under heavy loads, severe conditions and high speeds.

The highly engineered deck design in conjunction with the rotating blades **(A)** creates a powerful vacuum and smooth, continuous airflow that work together to leave no grass uncut. By keeping airflow continuous and avoiding airflow voids, clippings are evenly propelled and distributed broadly through an extra-wide discharge chute **(B)** making them disappear into your lawn.

Another key no-grass-uncut feature is the grass collector that pulls in tall grass instead of allowing it to slip around the outside **(C)** - lessening the amount of time and trimming required near trees and other obstacles.

Working in concert, the design, blade, deck and grass collector create an advanced-cutting system to provide a no-grass-uncut lawn that is cleaner and better than the competition.
