

Cub Cadet launches Challenger 550, 750 UTVs

*New side-by-sides
bring customization options*

Ohio-based Cub Cadet revealed in March two new utility vehicle models designed around the consumer with capability and customization in mind. The new Cub Cadet Challenger 550 and 750 models are the latest additions to the Cub Cadet utility vehicle family, providing industry-leading standard features and limitless customization opportunities.

The Challenger 550 brings a \$9,999.99 MSRP, with the 750 at \$10,999.99. The Challenger 750 camo is \$11,299.99.

The automotive-style cockpit design includes interior and exterior door handles, a tilting steering wheel, open storage and closed glove box. Premium sculpted seats, along with sophisticated, adjustable suspension shocks provide driver and passenger comfort over rough terrain.

Standard high-sided sealed doors eliminate the need for intrusive hip and shoulder restraints and offer splash protection from dirt, mud and water. The exclusive cab design

provides an attractive profile design, with sleek headlights, a standard roof, sealed rollover protection structure (ROPS) and sealed windshield. The new Challenger models can be completely weather-sealed in minutes with the quick addition of optional upper doors and a rear window.

With modular accessory attachment capabilities, the Challenger 550 and 750 allow for endless customization possibilities. A front accessory mounting panel above the windshield allows the Challenger 550 and 750 to be configured with a variety of items, including LED light kits or other aftermarket electronic accessories.

The exclusive rear mounting rack and accessory rack tubes save cargo bed space while enabling limitless accessory-mounting possibilities, including a gun boot, chainsaw boot and a spare tire mount.

“Customization of utility vehicles is extremely important according to the customers we continually talk with,” said Tom Mielke, UTV product marketing manager for Cub Cadet. “We’ve designed the Challenger Series with exclusive features that give owners

Cub Cadet has released its Challenger 550 and 750 models.

the power to customize their utility vehicle for the challenges they face — at the farm, ranch, off-road or in the woods. These new additions continue to raise the bar on standard features,

designed around what people want to do with their UTV while also improving style, comfort and convenience.”

The 34-by-46-by-11-inch cargo bed features an exclusive set of integrated attachment points — “T” slots — to help secure purpose-built accessories. The vertical slots accept standard 3/4-inch plywood for partitions and slots on top of the side rails to accommodate standard 1-by-3-inch furring strips. The bed boasts a 500-pound cargo capacity for hauling everything from firewood, to stone, to the trophies of a hunting or fishing expedition.

A growing list of accessories will be available in 2017 to customize the vehicle:

- Upper doors (pair)
- Scratch-resistant vented or folding polycarbonate windshields
- Rear window
- Spare tire mount
- Dual 11.5-Inch LED light bar kit
- Four cube LED light kit
- Rock sliders
- Rear bumper
- Front and rear turf tires
- 72-inch snow blade

The Challenger 550 offers a 546cc Electronic Fuel Injected (EFI) engine rated at 27.5

horsepower, while the Challenger 750 features a 35.8 horsepower 735cc EFI engine. Both models combine versatility and strength, accelerating to speeds up to 45 mph, towing up to 1,200 pounds and pulling up to 3,500 pounds with the standard winch. Three-way adjustable shocks and off-road tires with selectable locking front and rear differentials transform typically-challenging obstacles into no challenge at all.

The new utility vehicles are available in Cub Yellow, blue, red, black or camo to further fit the personalization goals of the customer. The Challenger Series 550 and 750 are the latest in a growing line of utility vehicles from Cub Cadet, joining the Challenger 400, the Challenger 500, the Challenger 700 and the Challenger 750 Crew. **PSB**
